

Reported by Quality Led Projects

aqua Unites Teams & Delivers Structure

ABOUT THE CUSTOMER

Quality Led Projects (QLP) is an IT consulting company based in Hatfield, UK. They specialize in project management and consulting services, focusing on clients who need robust test management and requirements management solutions. QLP operates in the Local Authority and Social Housing sector.

KUNDENZITAT

"Aqua has enabled us to give our client the control and traceability across the entire project, something they had never seen before. We are able to trace requirement to user story, to acceptance criteria, to test case, to defect, and back again. We are able to report in depth on the status of each individual item, or groups of items, and not only see who is responsible, but also allow multiple parties to review and approve at each stage"

Before

NO CENTRALIZED PROCESS

Prior to working with QLP, their client did not have any test management system in place. Testing activities were handled through ad-hoc, informal approaches without structured documentation, requirements traceability, or a unified process. This made it difficult for teams to collaborate and left significant gaps in quality assurance. The lack of centralized visibility and clear communication channels meant testing progress was hard to monitor and key requirements were often missed.

No traceability between requirements and test cases

Testing efforts scattered with no central repository

Communication gaps between business, IT, and project teams

Inability to track comprehensive test coverage and progress

After

UNIFIED COLLABORATION

With aqua, QLP brought the entire project together under a single TMS umbrella, actively involving third party suppliers, business stakeholders, IT, and project teams in every phase of testing. Aqua's requirements management and collaboration features enabled seamless traceability, structured workflows, and clear accountability. Centralized dashboards and AI-powered tools simplified tracking, documentation, and automation planning. Enhanced transparency and real-time collaboration removed silos and accelerated project delivery. Looking ahead, QLP plans to leverage aqua's automation and AI features to further streamline and scale their consulting services.

Enable full traceability from requirements to test cases and defects

Centralize all test management activities for greater control and visibility

Boost communication and collaboration between all stakeholders

Lay the groundwork for scalable automation and continuous improvement
